Professional Summary

Final-year Electrical Engineering and Computer Science student at the University of Sydney with strong foundations in algorithms, artificial intelligence, signal processing, and systems engineering. Experienced in developing data-driven and algorithmic solutions, including interactive algorithm visualisation tools and machine learning-based systems for analysing complex datasets. Skilled in translating theoretical concepts into practical implementations through efficient software design, performance evaluation, and data analysis. Motivated to contribute to technology and data-focused teams by applying analytical problem-solving and engineering principles to build intelligent, scalable solutions that deliver real-world impact.

Education

2022 – Ongoing Early (predicted 2027)	University of Sydney, Bachelor of Engineering Honors (Electrical) and Bachelor of Science (Computer Science)
2016-2021	Carlingford High School, Year 12 in 2021

Skill highlights

Computer Software	Use of Microsoft Office, Excel, Python, MATLAB, R studio, LaTeX, Java, C, and Linux during university
Time management and multitasking	My time management and multitasking skills have been honed through balancing academic responsibilities and casual employment ensuring efficient and effective task completion which is evident through 90% customer satisfaction as a customer service team member at Woolworths Supermarkets
Work Ethic	I consider myself a strongly motivated individual with good attention to detail, this has resulted in my university results and previous tutoring jobs. Additionally, in my dedication to working throughout my university degree
Communication and leadership	My communication and leadership skills have been developed and strengthened due to my involvement in mentoring and tutoring roles, university group projects and employment. Additionally, my time as customer service team member at Woolworths has developed by communication skills
Willingness and interest in gaining new skills	Evidenced by my hobbies and various skills such as volunteering in the Sydney Royal Easter Show as a customer service volunteer and involvement with versatile tasks and people across various age groups

Professional experience

December 2025 – February 2026	Nanosonics – Engineering Intern Consultant Tested 20+ fan units concurrently across repeated startup cycles to quantify stickiness-related delays with millisecond-level resolution. Executed 50+ test cycles to analyse variability, identify performance outliers, and support startup reliability assessment. Implemented standardised test procedures that improved result consistency and reduced testing turnaround time by ~30%, with findings documented in technical reports supporting product verification activities.
--------------------------------------	---

November 2022 – May 2024

Woolworths Supermarkets – Customer Service Team Member

Processed 200+ transactions/shift with high accuracy, consistently balancing tills at end-of-day. Resolved customer inquiries with a 95%+ issue resolution rate, ensuring a positive shopping experience. Maintained checkout efficiency, reducing average wait times during peak hours by 5 minutes/transaction.

March 2024

Girls Programming Network (GPN) – Programming Tutor

I taught Python and problem-solving concepts to groups of 20+ high school students per session. Improved student coding proficiency, with 80% of participants completing end-of-day coding challenges successfully by including interactive activities in the teaching schedule.

February 2023 – Ongoing

University of Sydney – Engineering Peer Mentor

I supported a cohort of 30+ first-year engineering students in academic and social transition. Facilitated weekly mentoring sessions that improved student retention and engagement in the faculty. Provided guidance on study skills, course planning, and university resources, resulting in positive feedback scores (90%+) from mentees by adding weekly coffee hangouts with the group.

September 2023 – Ongoing

BIOTech Futures – Team Mentor

Guided 3 high school teams (15+ students total) through ideation, research, and prototype development. Helped teams achieve competition milestones, with one project shortlisted for innovation awards. Developed mentoring resources to streamline project planning and execution for future cohorts.

October 2022 – December 2022

Betty's Burgers – Front end cashier handling and back house kitchen hand

Handled 150+ customer orders/shift, maintaining speed and accuracy during high-volume hours. Cross-trained across front and back of house, improving team flexibility and reducing order wait times by up to 20%. Contributed to consistently high customer satisfaction scores through efficient service and food preparation quality.

Projects and Community involvement

February 2025 – June 2025

Multidisciplinary team project to design a stress detection and mitigation system integrating a wearable device with a mobile application. The project combined physiological signal monitoring (e.g., heart rate variability) with machine learning models for stress detection, while the app delivered personalised interventions and resources to support wellbeing using AI.

Sydney Royal Easter Show – Volunteer

April 2022

Assisted and engaged with hundreds of visitors daily, ensuring smooth event operations across diverse age groups. Coordinated event activities and provided clear communication, contributing to a positive visitor satisfaction rating (90%+ overall event rating). Supported crowd management during peak hours, helping reduce wait times by 10% and maintain safe, enjoyable experiences.
